

Set up BTO CV

Follow these steps once. Your Codex agent handles the installation.

BTO CV converts an original CV into an editable Word document in our company format.

1. Get access - you do this

Create an account at github.com/signup if you do not have one. Send your GitHub username to Keyan FEILI. Accept the invitation he sends you.

2. Open Codex - you do this

Open the **Codex desktop app** and sign in with your own ChatGPT account. Start a **local chat** that can work on your computer. If you do not have the app or cannot find this option, ask Keyan to help.

3. Give this guide to your agent

Attach this PDF to that chat and send: **“Follow the setup instructions below and install BTO CV for me.”** You can also copy the box below into the chat.

Instructions for the Codex agent

Set up BTO CV from <https://github.com/KeyanFEILI/BTO-CV.git> for this user. Use a local Codex environment. Check and reuse Python 3, Git and a plugin-capable Codex CLI; install only missing tools with the user's approval. Configure non-interactive GitHub access through browser sign-in if needed; GitHub CLI is optional. Ask the user to complete sign-in themselves.

Register or reuse bto-cv-marketplace as a Git source tracking main. Install and enable bto-cv@bto-cv-marketplace, version 3.1.0 or later, without duplicates. Ensure the hook can run python on Windows (python3 elsewhere), Git and Codex; configure BTO_CODEX_BIN if needed.

Guide the user to review and trust the BTO SessionStart hook. Do not bypass trust. Run the installed hooks/update.py --force --check and verify current or updated. Then guide the user to start a new local chat and confirm the trusted hook fires. Generate a fictional test CV to verify editable DOCX output. Report success only after these checks; explain any blocker and refer the user to Keyan.

4. Complete the prompts - you do this

When asked, complete GitHub sign-in in the browser, approve needed software installations, and review and trust the BTO update hook. Your agent will show you where to click. Keep passwords and sign-in codes out of the chat.

5. Start using it

When setup is confirmed, open a new local chat, choose **BTO CV**, attach your original CV and ask: **“Convert this into an editable BTO Word CV.”**

Updates are checked automatically when a session starts or resumes, at most once daily. Open a new chat when an update asks you to. Review the hook again if prompted. For setup problems or changes to the shared format, contact **Keyan FEILI**.
